

# 5 Ways To Prevent a Cyber Attack!

## Part 1

### Security Assessment

It's important to establish a baseline and close existing vulnerabilities. When was your last assessment?

Date: \_\_\_\_\_

### Spam Email

Secure your email. Most attacks originate in your email. We'll help you choose a service designed to reduce spam and your exposure to attacks on your staff via email.

### Passwords

Apply security policies on your network. Examples: Deny or limit USB file storage access, enable enhanced password policies, set user screen timeouts, and limit user access.

### Security Awareness

Train your users - often! Teach them about data security, email attacks, and your policies and procedures. We offer a web-based training solution and "done for you" security policies.

### Advanced Endpoint Detection & Response

Protect your computers and data from malware, viruses, and cyber attacks with advanced endpoint security. Today's latest technology (which replaces your outdated anti-virus solution) protects against file-less and script based threats and can even rollback a ransomware attack.
